EDUCATION

Boston University, Metropolitan College

Master of Science in Applied Business Analytics (MS ABA) - Expected Graduation May 2027

University of California, Davis

Bachelor of Arts in Economics - Graduated 2022

PROFESSIONAL EXPERIENCE

DMC Power, a Hubbell Incorporated Company – Carson, California

Quality Analyst | Aug 2022 – Mar 2026

- Analyzed operational, supplier, inspection, and ERP data to identify recurring issues, process risks, cost drivers, and improvement opportunities across manufacturing operations.
 - Investigated manufacturing and supplier discrepancies using root-cause analysis and coordinated corrective actions with engineering, manufacturing, purchasing, and external suppliers.
 - Synthesized quality KPIs and operational trends into management-review materials to support data-driven decisions and process-improvement priorities.
 - Extracted and validated Oracle JD Edwards and Excel data for operational investigations, cost analysis, performance reporting, and management decision-making.
 - Coordinated ISO 9001 internal audit activities across functions and tracked corrective actions through closure to strengthen compliance and operational readiness.
-

SELECTED PROJECTS

Nondestructive Testing Cost & Operational Analysis

DMC Power (Power BI, Excel, Oracle JD Edwards)

- Analyzed 10+ years of purchase-order and testing data to identify spending trends, testing demand, turnaround constraints, and key cost drivers.
- Evaluated an in-house CT scanning business case using approximately \$98K in 2025 YTD spend, 63 POs, and 903 tested parts, including ROI, payback, and purchase-versus-rental scenarios.

Green Mountain Brew House: Operations & Investment Strategy Analysis

MET AD715 – Quantitative and Qualitative Decision-Making

- Evaluated a proposed in-house production investment using break-even, sensitivity, what-if, risk, SWOT, PESTEL, and simulation-based analysis.
- Assessed demand, capacity, staffing, inventory, and channel strategy and recommended a balanced wholesale-retail approach to improve utilization and profitability.

Business Optimization & Scenario Analysis

MET AD571 – Business Analytics Foundations

- Developed an optimization model using predictive sales forecasts, staffing costs, commission rates, and operating constraints to maximize projected NPV.
 - Tested base, high-, and low-confidence scenarios using R forecasts and Excel Solver, identifying a stable strategy with projected NPV of approximately \$0.53M–\$1.67M.
-

SKILLS & LANGUAGES

- **Analytics:** Excel, Power BI, SQL, Python, R
- **Methods:** Cost Analysis, ROI Analysis, Root-Cause Analysis, KPI Analysis, Process Improvement, Scenario Analysis
- **Systems:** Oracle JD Edwards ERP
- **Languages:** Mandarin Chinese (Native), English (Fluent), Japanese (JLPT N1)
